

NEUROADAPT

Cordyceps, rhodiola, schisandra, and Sirtmax® together create a comprehensive adaptogenic and mitochondrial support formula designed to enhance energy production, stress resilience, detoxification capacity, and healthy aging at the cellular level. Cordyceps supports mitochondrial ATP generation and improves oxygen utilization, helping increase stamina, reduce fatigue, and promote immune and respiratory efficiency. Rhodiola acts as a neuroendocrine adaptogen, balancing cortisol and supporting dopamine and serotonin pathways to improve mental clarity, mood stability, and resistance to physical and psychological stress.

Schisandra provides hepatoprotective and antioxidant benefits by supporting phase I and II liver detoxification, glutathione activity, and cellular protection from oxidative damage, while also enhancing endurance and recovery. Sirtmax®, a stabilized resveratrol-based polyphenol complex, activates sirtuin signaling pathways associated with mitochondrial biogenesis, metabolic flexibility, inflammation control, and longevity-related cellular repair mechanisms. Collectively, these compounds work synergistically to promote sustained, non-stimulant energy, sharper cognition, improved recovery from environmental and inflammatory stressors, and long-term metabolic resilience, making the combination particularly useful for individuals experiencing fatigue, toxicant burden, high stress demands, or age-related declines in performance.

NEUROMEDULLA

Neuro Medulla Complex is a dietary supplement designed to support brain health and cognitive function through a blend of neuro-supportive nutrients and tissue-derived components. It combines **lyophilized bovine brain tissue (including medulla oblongata and related brain regions)** with key nutrients such as **vitamin B1 (thiamine), choline, GABA (gamma-aminobutyric acid), phosphatidylserine, and Ginkgo biloba extract**, among others, to provide broad neurological support. The formula aims to support **cognitive performance, memory, mental clarity, and neurotransmitter balance**, and may also promote **relaxation and healthy mood regulation**. Some formulations highlight traditional use of amino acids and glandular extracts to nourish neural tissues and promote optimal brain function when taken as directed.

ENDURO2

The key bioactive in **Enduro2 LPT is LANDKIND® Pure Salidroside** is a highly concentrated and sustainably produced form of **salidroside**, the primary active compound found in the adaptogenic herb *Rhodiola rosea*. Unlike traditional Rhodiola extracts — where salidroside represents only a small fraction of the total plant material — LANDKIND® is crafted via a **proprietary fermentation process** that yields a consistent, high-purity salidroside ingredient without harvesting wild Rhodiola (which is now considered threatened due to overharvesting) and avoids plant-based contaminants like heavy metals and pesticides.

Salidroside itself is a **polyphenolic adaptogen** with a growing body of research supporting multiple beneficial mechanisms relevant to human performance and resilience. It has demonstrated **anti-fatigue, antioxidant, and anti-inflammatory effects**, and is believed to modulate the hypothalamic-pituitary-adrenal (HPA) axis to help the body adapt more effectively to physical and psychological stressors.

Importantly, early clinical research using LANDKIND® Pure Salidroside shows that daily supplementation can **enhance oxygen uptake and aerobic endurance, reduce exercise-induced muscle damage and fatigue**, and support **stable mood states** under physical stress compared with placebo — outcomes directly relevant for athletic performance and recovery.

Beyond performance, salidroside's antioxidant and anti-inflammatory properties may also contribute to **cellular protection, neuroprotection**, and potentially improved **cardiovascular and metabolic function**, though more human-focused research is still emerging.

In practical terms, **LANDKIND® Pure Salidroside** delivers the essence of Rhodiola's adaptogenic benefits in a **low-dose, consistently potent, and research-backed** format that supports stress resilience, energy metabolism, endurance, recovery, and overall performance.

FLORAMEND

A daily probiotic designed to support a healthy gut microbiome, which in turn promotes smoother digestion, improved nutrient absorption, and balanced bowel function.* The formulation contains a proprietary blend of human-derived *Lactobacillus* and *Bifidobacterium* strains delivered in an **acid-resistant, moisture-resistant capsule** that helps ensure the live bacteria survive stomach acid and reach the lower intestine where they can be most effective.

* This supports **digestive comfort, regularity, and immune system function** by strengthening the gut's microbial balance and supporting the gut-immune axis.* Additionally, research on the specific strains in this formula suggests it may **support healthy body composition and weight management**, with some studies showing modest reductions in visceral and subcutaneous fat and improvements in waist circumference and BMI.* The probiotic is convenient (no refrigeration needed) and suitable for everyday use to help maintain overall GI health and systemic wellness

MODUCARE

Moducare is an immune-balancing supplement made from plant sterols and sterolins (typically in a 100:1 ratio) that helps regulate, rather than stimulate, immune function. Its primary benefit is restoring immune homeostasis, especially in conditions characterized by immune imbalance such as chronic inflammation, recurrent infections, autoimmune tendencies, allergies, and stress-related immune suppression. Research shows that Moducare helps shift the immune response toward a healthier Th1/Th2 balance, lowers excessive inflammatory cytokines, and supports healthy cortisol levels, making it useful for people with chronic stress, allergic disorders, and dysregulated immune systems.

Clinically, Moducare has been shown to reduce allergy symptoms, improve upper respiratory resilience, and support patients with autoimmune or inflammatory conditions by calming overactive immune responses while strengthening underactive ones. It also provides antioxidant protection and supports mucosal immunity, making it valuable for those with chronic infections, environmental sensitivities, or immune burnout. Overall, Moducare offers gentle but consistent immune normalization, helping the body defend effectively without promoting overstimulation.
